La Clef des Champs

croQu'terre

À la Belle Courgette

- Open-source Web App (Ruby on Rails) started in 2014
- Manage all sorts of things, including members, memberships, deliveries and depots, vegetable basket content, member activities and participations, absences, ...
- Fully automatic invoicing and payments retrieval (via Bank connection)
- Responsive member page
- Synchronisation of members with MailChimp list
- App translated in French and German
- Developed and maintained by Thibaud Guillaume-Gentil

Cagette.net

Who is it made for?

- CSAs , local food buying groups (non profit organizations), farmers, farmers collective
  - Its able to manage "membership" orders for CSAs and variable orders (like the "food assembly" or any local food online shop)
  - the app is based on the concept of "Cagette Group" which is a group of people linked to a distribution place and who order products to local farmers on a regular basis ... IRL a group can be a CSA, a non profit, or a totally unformal group of people.
  - This can be called sometimes a "food hub" in other apps.
  - catalog and products management
  - distribution planning
  - manage volunteers roles and volunteers planning
  - messaging to the group
  - payment management : we're working mostly on this currently

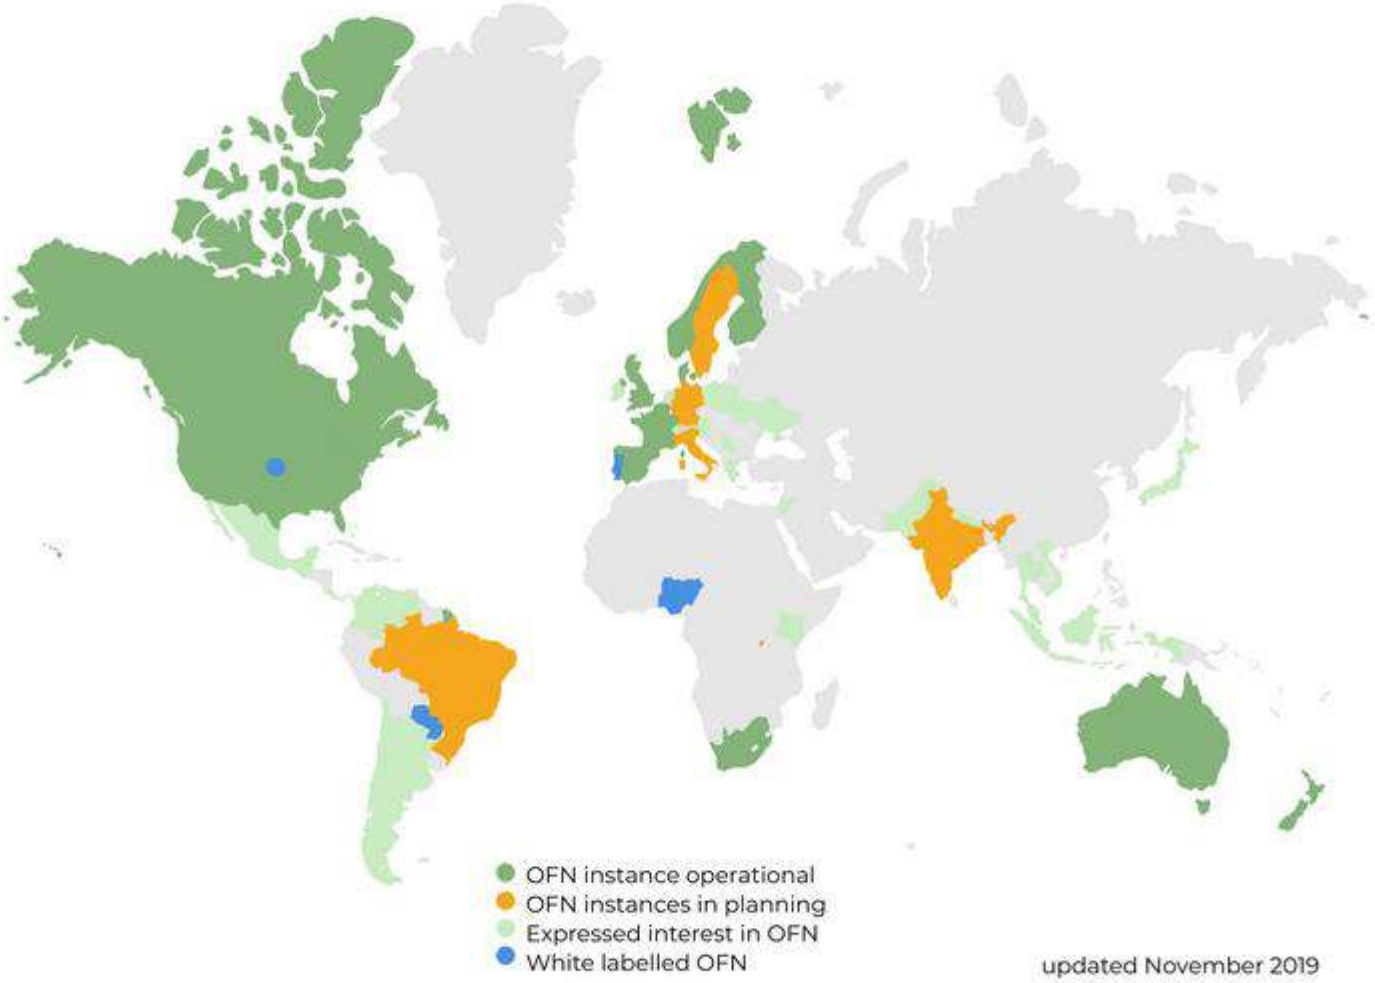
- Locale/language?

- its in french ... we started to localize the app (english, german ...) but it's not finished ... this work is paused as it's not our priority currently (our funding is limited so we focus on other projects)

- What's the current status?
  - project started in 2015, as a company since 2017.
  - 40 000+ active families
  - 1020 active groups
  - France and some groups in Belgium

- Who is behind it?
  - the project is supported by ALILO from Bordeaux, France
  - ALILO is a "SCOP" company (cooperative company, workers ownd) of 4 people.
  - Founders are Sébastien Zulke (agriculture engineer) , François Barbut (developer of Cagette.net)
  - The project is financed by an education program for farmers run by our company. (MOOC + physical meetings)
  - this program aims to help farmers to use Cagette.net to save them time , and also how to communicate to find new clients.
  - n

OPEN FOOD NETWORK



- Who it is made for all SFSC project, but I would even say any local short chain seller (indeed a lot of buying groups, buyers and cooperatives are selling non-food products thanks to the platform as well - crafts, wood, cosmetics...). The platform enables anybody to sell its product and build and participate to a local network.

- Actively used in 15 countries.

- Who is behind it: the Open Food Foundation (but we still need to work on our international structure).

- The platform license is GNU GPL v3.

- Main website: https://www.openfoodnetwork.org/

Clic'AMAP

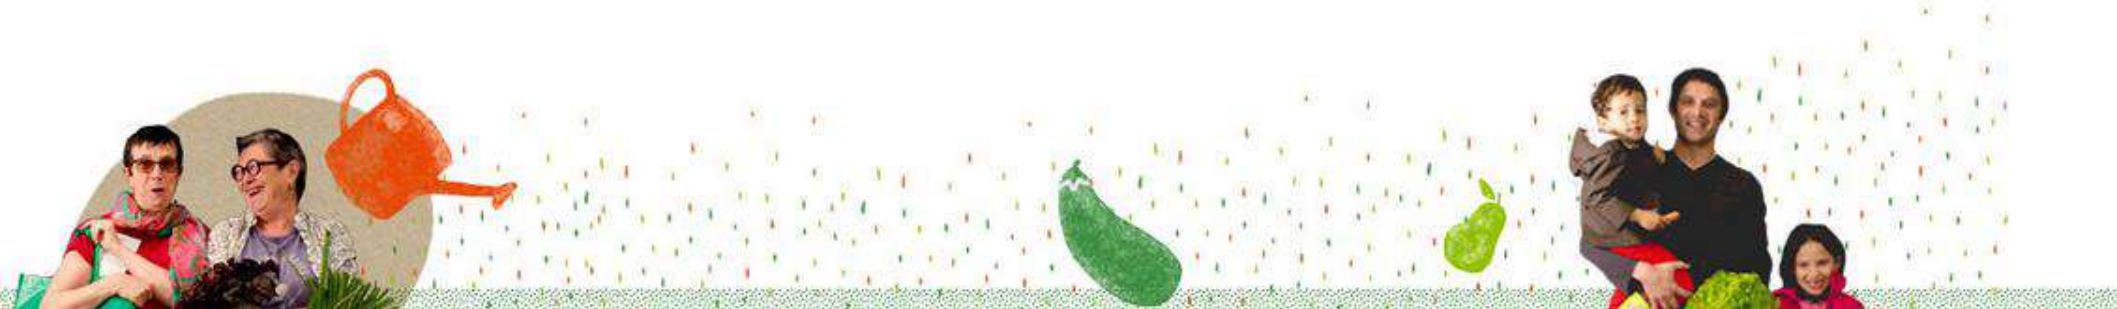
Email

Mot de passe

Connexion



- Who it is made for: French CSA. Basically it is everything a CSA needs to run.

- French only so far

- Actively used in France

- Who is behind it : the local Auvergne-Rhone-Alpes AMAP Movement and MIRAMAP. The platform license is not defined yet, but the idea is to open source it.

Data Food Consortium

- Who it is made for : SFSC platforms. This project is not a platform per se but a standard that all platform are welcome to adopt in order to collaborate and become interoperable

- the standard is for now documented in English

- beta-testing (the standard exit, now we are building a prototype to test its usability)

- Who is behind it : Open Food Network, the Food Assemby, Cagette, Panier Local, Open Food Facts are among the platforms who actively contribute. Very Frenchy but we are really looking forward to have other countries on board! All ressources are published under open source licenses.

Growing Futures

JUNTAGRICO

Wir teilen unseren Code

damit andere ihre Ernte teilen können

- Aimed at csa with harvest sharing and member participation
- At the moment only in German but ready for translation
- Used by 10 initiatives in Switzerland and more coming, and some German initiatives are also interested
- Development and hosting is manged by the juntagrico society
- Developer community out of the initiatives approx 3 active devs but more every day

- Unified payment without middleman (MangoPay)
- Supplier friendly
  - 1 product list
  - Different sales channels with different costs
- Delivery schedules on different levels (product, sales channel)
- Returned Packaging, Shop membership, Market Costs

Open
Olitor

- web-based, multilingual platform facilitating the setup of a community supported agriculture (CSA) platform, linking producers and consumers.

- Functionalities include: member management, vegetable logistics, member participation, Payment (ESR & SEPA), member portal, …

- Available in multiple languages (FR, DE, EN, SP, HU, CZ)

- Actively used: 5 initiatives in Switzerland (4 to come in 2020), 2 initiatives in Germany

- Initiated by soliterre (CSA), Bioabi (Abobox) and Tegonal (Software collective). Now supported by association OpenOlitor and adapted to German market by sunu.

RUKOLA
Soft

- Name of the Tool: Gemüse-Anbauplaner (Vegetable-Cultivation-Planner)

- Who is it made for: It´s for KMU-vegetable growers, market gardening and Solidarity Based Agriculture-Farms. It´s including a crop calendar, cropland-planer and a to-do-planer.

- The language and specific units are for German use in the current version.

- The Cultivation-Planner is in the beta-phase and is since October tested by practitioners.

- Who is behind it: The software is developed by Rukola Soft UG (Haftungsbeschränkt) which we founded a few weeks ago. “We” means Yasmin Kemnitz our CEO and primary developer. Urs Mauk and Philip Kosanke, both consultants of the german solidarity based agriculture network and freelancers. They are responsible for the concept, testing and marketing.

SolidBase App

SOLIDBASE

- Budgeting App for initiatives with member based solidary financing approach.
- Focus on transparency and communicating Budget with members
- Available in English, German, Czech, Hungarian and French
- Developed as part of the Erasmus+ Project “SolidBase” as educational tool.
- Available to use
- Web application based on SoLid server technology
